

Wroclaw, dnia 4th July 1958

Professor Dr. J. Lederberg,
Department of Genetics,
University of Wisconsin,
Madison 6, Wisconsin,
U.S.A.

Dear Professor Lederberg,

Thank you very much for your letter of 15th March.
I owe you the apology for so long silence. I was yet
awaiting for the decision of the Rockefeller Foundation.
Unfortunately I have received their letter, informing me
about awarding to me the grant, only few days ago.

I am planning my visit in USA for two months. I under-
stand quite well that it will be more convenient for you,
if I will postpone my visit in Madison until a week after
the Congress in Montreal. I quite agree with you and I shall
arrange my journey according to your wish.

I hope to meet you earlier in Stockholm and Montreal
and to speak with you about this.

Regarding the cold-induced resistance I cannot say
anything about the F-minus parents. As you, may be, remember
this kind of resistance to low concentrations of strepto-
mycin is only semi-stable and is decreasing progressively.
For the present time I have given this problem to one of
my junior pupils, focusing all my work in laboratory on other
topics /induced penicillin resistance, S - R dissociation
and the inheritance of induced variation in progeny of
individual cells during few generations/. I am looking for-
ward to discuss with you this results. In connection with your
paper in J. Bact. about L-forms I have for you an information
very interesting from your point of view. I am now not able
personally to continue this research, because my assistant,
who was working on this, is now in another town.

With very best regards and best wishes

Yours sincerely

Dr. W. Kunicki-Goldfinger
